

SIDEQUESTS

MIAMI MVP

**DEVELOPMENT &
LAUNCH READINESS**

AUGUST 2026

Integrated alpha. Pre-pilot.

The app has real product surface area, but two systems make launch claims provisional.

sidequests

46 / 100

ANALYST MATURITY

A coherent system shape—not yet a trustworthy field operation.

Audit score, not customer or usage data.

BLOCKER

01

Live Supabase is inactive

Production deploy is ready, but database rows and migrations cannot be verified.

BLOCKER

02

Player truth is split

Quest RPCs write user_profiles while key UI reads profiles.

GAP

03

Growth is not observable

Contact simulates success; analytics stay in local storage.

THE RECOMMENDATION

Do not add feature scope.

Run a stabilization sprint: restore the backend, consolidate progression, complete one measured real-world loop, then prove repeat behavior with a dense closed pilot.

Architecture today

A clean MVP stack with a repository boundary—and one dangerous data seam.

sidequests

EXPERIENCE

Vite + React SPA

Marketing, onboarding and app routes

Mapbox

Quest discovery and navigation

DOMAIN BOUNDARY

Repository interface

Supabase / Local / Mock adapters

Quest + QR routes

Deep links, scans, completion and notes

DATA + OPERATIONS

Supabase

Postgres, Auth, Storage, RPCs, RLS

Two profile tables

Identity and economy diverge

Local analytics

No production funnel sink

NOT PRESENT

Custom app server · payments · production CRM · mounted admin portal · mounted partner portal

The product loop

The journey is visible from discovery to completion. The return loop is disconnected.

sidequests

WHY THE LOOP BREAKS

Verification

Only venue_code is substantive; other completion types can resolve true.

Visible utility

Rewards, wallet and history code exists but is not mounted.

Consistency

Onboarding writes 100 XP at Level 1; the curve says Level 2.

XP, points and level progression

XP is permanent growth. Points are spendable utility. The model is clear; the UI truth is split.

sidequests

XP

Never spends down

Easy 50 · Medium 150 · Hard 400*

*Hard value is the product target.

POINTS

Spendable reward balance

Easy 25 · Medium 75 · redemption is atomic

Ledger is truth; balance is a cache.

LEVEL THRESHOLDS

$$100 \times \text{level} \times (\text{level} - 1) \div 2$$

CRITICAL: progression RPCs write user_profiles; wallet and profile UI read profiles.

The onboarding handoff

Six polished steps establish taste and identity. The live quest and reward transition needs repair.

sidequests

WHAT WORKS

A distinctive identity journey

- Guest choices persist locally
- Account creation preserves destination
- Terms, privacy and marketing consent are separated
- Missing profiles self-heal after authentication

WHAT BREAKS TRUST

The first reward is not real yet

The first quest preview is generated from static mock data. The profile writes 100 XP at Level 1, even though the curve makes 100 XP Level 2. Earned value then lands in the wrong player table for key UI surfaces.

Readiness matrix

Product surface area is ahead of operational maturity. Stabilize the lowest bars first.

sidequests

WHAT
THE
SCORE
MEANS

Built

Partial

Blocked

Verify

Rubric based on mounted code, live configuration and operational proof—not volume of files or feature concepts.

GTM: win a neighborhood first

Concentrate partners, quests and collateral so the first cohort can feel density in one afternoon.

sidequests

RECOMMENDED WEDGE

Wynwood ♦ one adjacent cluster

8–12 contracted venues · 3 creator/community guides · 25–50 founding explorers

50

qualified venues

20

conversations

8–12

live partners

Planning targets—not current pipeline data.

MEASURABLE ACQUISITION LOOP

01

Partner

Staff script + storefront QR

02

Creator

Curated questline drop

03

Explorer

Complete + share + return

04

Evidence

Traffic + redemption + renewal

North star: first completion ≤7 days · second quest ≤14 days · partner willingness to pay

Cost to market

Infrastructure can stay lean. Credibility, rights and field operations carry the budget.

sidequests

CLOSED PILOT

\$350/class

base application

Planning ranges are not quotes. Engineering labor and founder opportunity cost are excluded.

Entity, legal and compliance

Policies are drafted. The operating company, rights and request workflows must become real.

sidequests

DEFAULT PILOT

Florida LLC

Founder-funded Miami pilot, simple ownership and no near-term institutional financing.

- Articles + registered agent
- EIN + operating agreement
- Bank + accounting + insurance
- County / city tax receipts
- Partner agreements in entity name

IF FUNDRAISING

Delaware C-corp

Evaluate before launch if institutional capital, options or complex ownership are expected soon.

- Counsel-led formation
- Stock + IP assignments
- Cap table + option plan
- Florida foreign qualification
- Higher recurring administration

LAUNCH COMPLIANCE GATES

- ! **Policy accuracy**
Location, analytics, retention and deletion match reality
- ! **Age boundary**
13+ gate and counsel review of COPPA posture
- ✓ **Content rights**
Partner logos, photos, offers and QR placement
- ✓ **UGC operations**
Moderation, takedowns and DMCA analysis
- ✓ **Accessibility**
Keyboard, screen reader, contrast and reduced motion
- ✓ **Incident readiness**
Processors, access review and breach owner

Operating recommendation only—not legal or tax advice. Confirm with Florida startup counsel and a CPA.

90 days to credible evidence

Three gates convert the current alpha into a measured closed pilot.

sidequests

DAYS 0-14

01

Make it trustworthy

- ✓ Restore Supabase
- ✓ Unify player truth
- ✓ Verify migrations + RLS
- ✓ Fix progression consistency

GATE: complete + redeem + correct visible balance

DAYS 15-45

02

Operationalize

- ✓ Mount Progress + Rewards
- ✓ Connect CRM + analytics
- ✓ Contract 8-12 venues
- ✓ Entity + insurance + counsel

GATE: 100% partner / quest / QR checklist

DAYS 46-90

03

Run and learn

- ✓ Recruit 25-50 explorers
- ✓ Weekly field QA
- ✓ Measure repeat + redemption
- ✓ Ask partners to renew / pay

GATE: repeat behavior + partner value

THE NEXT MILESTONE

**One real-world loop.
One source of truth.
One measurable outcome.**

PILOT-READY DEFINITION

A real explorer discovers, scans, completes, progresses, redeems and returns—and every step can be observed.

DECISION GATE

**Expand only when
the pilot proves:**

01 Reliable progression

02 Repeat behavior

03 Partner-reported value

**04 Willingness to renew or
pay**

Then the 62-row pipeline and city expansion plan become leverage—not surface area.
